

Work Shop Facility

Under the supervision of our experienced Engineers and Workshop Manager we provide a state of art facility for Panel assembly and FAT. Our trained and experienced technicians and electricians make sure the readiness of panel for pre FAT testing well before the proposed FAT date. We provide full integrated testing facility to our customers to conduct 100% Factory acceptance test. We have stringent quality control process to ensure that all incoming and outgoing products are tested to the project needs. We have tailor made simulation boards for all types of signals to do the integrated testing for the systems to ensure that site commissioning time is utilized effectively and to ensure that customer has fully witnessed his process in our workshop.

Our regular and timely checkups of stock helps us keeping enough stock of standard accessories, however major components like PLC, Gateways, Routers, Servers and instruments are procured and on time delivery is ensured by our procurement Manager avoid any kind of delay during Panel assembly which in turn helps us conducting FAT on time and deliver the panels to our clients on agreed dates.

We believe in punctuality and work hard to meet the timeline for the final delivery of panels and for which we have been receiving appreciation from our Clients.
